

How To Measure Your Kitchen

- Step 1** Start at one point in the room and measure the wall length from one corner to the nearest door or window casing (the outside of the trim). Then measure the overall width of the window or door opening (including the door and window casings). Continue the procedure proceeding around the entire room until you return to the starting point.
- Step 2** Measure the height of the ceiling. Note any interruptions (Beams, ducts, etc.)
- Step 3** Locate your appliances on the drawing

DIY Kitchen Floor Plan Grid

After all measurements are completed, you can begin drawing your kitchen layout using the grid below. Each large square represents 1 sq. ft. and the small squares are 3". Keep your drawing simple like the example floor plan.
